

iA-Passport[®]

Unique Electronic Database of Travel Document Templates

iA-Passport Benefits

- Fast, secure, automated document processing
- Easy to use, requires little training
- Reduces loss due to fraud
- Helps to stop forgers and identity theft
- Easily integrated with existing infrastructure
- Economical and easily upgraded – a long-term investment in security
- Companion iA-License™ database supports U.S. & Canadian driver's licenses
- Subscription service for database updates as documents evolve.
- Once installed, iA-Passport works automatically behind the scenes, with no need for the operator to take any extra steps.

What is iA-Passport?

iA-Passport is an extensive electronic database of travel and identity document features for use with the Viisage iA-thenticate platform. This unique database includes forensic information on passports, visas, U.S. Immigration cards, national IDs, and more.

iA-Passport enables the iA-thenticate platform to recognize and authenticate more international travel and identity documents than any other document reader/authenticator on the market today.

At a Glance

iA-Passport enhances iA-thenticate for more-advanced security testing of many ICAO documents. Advanced document analysis includes:

- Searching for seals, logos, and other patterns that should be present in specific areas of a document.
- Searching patterns that appear under ultraviolet (UV), infrared (IR) light as well as visible light.
- Checking for patterns and features that might be present on a fake document but not on a legitimate one – under visible, UV, and IR light.
- Checking for evidence of tampering in the 3M[®] confirm laminate.

Target Markets and Applications

iA-thenticate with iA-Passport adds security to any environment where the authentication of identification documents is crucial. Its easy integration into current workflow processes can incorporate additional security for:

Border Control	Financial and Banking
Visitor Management	Credentialing and Badging
Access Control	Passenger Check-in

iA-Passport®

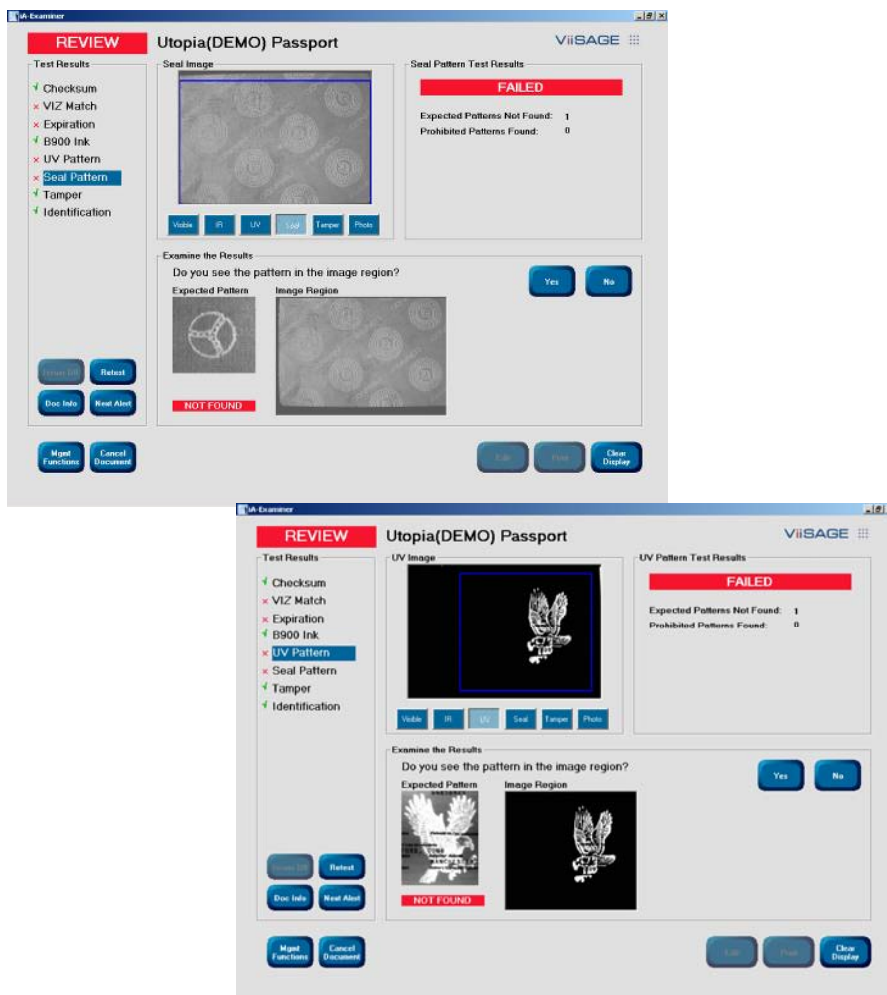

FEATURES AND FUNCTIONS

Real time Verification of Security Features

No two travel documents are alike. That's what makes document authentication so difficult and iA-Passport essential. The iA-Passport database is trained to recognize and compare multiple, unique security features designed into each individual document type – automatically.

Automated and Easy-to-Use

iA-thenticate with iA-Passport processes travel and Identity documents quickly and securely. Just place a passport, visa, or other document on the glass and iA-thenticate with iA-Passport does the rest. Document processing and authentication are fully automated. If there is an alert, iA-thenticate takes operators through step-by-step procedures to resolve issues.

System Requirements

An iA-thenticate®, iA-thenticate color, iA-thenticate Plus unit or an iA-thenticate with Smart Chip technology is required to support iA-Passport.

- The iA-thenticate, iA-thenticate color and the iA-thenticate with Smart Chip technology units require a PC for operation.
- The iA-thenticate Plus has the PC integrated into the unit.
- Microsoft Windows XP or 2000

The Document Experts

Viisage's Subscription Service eliminates the need to maintain a trained staff of technology experts. With the ability to collect and analyze documents worldwide, Viisage's team of document experts can accurately train and test documents to the highest level of reliability. Working in conjunction with engineering and quality assurance personnel ensures that all additions and enhancements are optimized for the technology.

On average, two database updates are issued per year. Premium service is available for customers requiring more frequent updates and is quoted separately.

Please contact our Professional Services Team at sales@viisage.com if you have any requirements beyond those specified.
