

Streamline your distributed live scan environments with ...

## Store and Forward

Add more control over your live scans with the Store and Forward:

- Enhanced data processing control
- Standards-based for vendor interoperability
- Customized workflows specific to your application

The Store and Forward consolidates and transmits data from multiple live scan systems to a centralized Identix® ABIS® system or AFIS.

This standards-based, multi-biometric data software application manages finger, face, full hand as well as demographic information and sends to an AFIS for search.

Along with other tools, such as an edit workstation, and print and management capabilities, the Store and Forward simplifies data transmissions through customization to meet your design needs.

Consider the following key feature benefits:

### MULTI-BIOMETRIC FRAMEWORK

- Single application handles workflow for finger, face and full hand

### SUPPORTS

#### MULTI-VENDOR ENVIRONMENTS

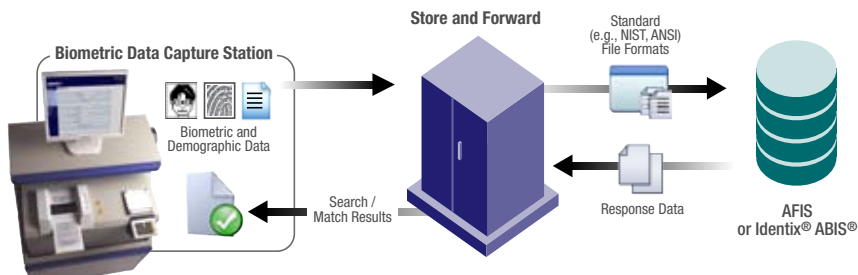

- Standards-based approach links Identix® and third party live scans to third party AFIS and mugshot systems

#### EASILY CUSTOMIZED FOR ENHANCED WORKFLOW

- Customizable routing control schemes
- Interfaces with a variety of add-on options such as editing, printing, reporting and storage to increase workflow flexibility

## Functionality

- 1 TouchPrint™ devices are used to capture biometric data.
- 2 Store and Forward receives the records from the live scan systems.
- 3 The Store and Forward temporarily logs these records until they are transmitted to various databases for search, such as an Identix® ABIS® system, clearinghouse, or local, state or federal AFIS.
- 4 The Store and Forward receives the search/match results and forwards them back to the originating location or to an adjudication station.
- 5 Receipt of the message is logged in the audit trail, and held until the records fall off the holding queue.
- 6 Detailed reports are available, or customers can utilize Crystal Reports as adjunct reporting.

## Store and Forward Specifications

### System Requirements

Desktop PC platform: Microsoft Windows XP or Professional 2000

Server-based PC platform: 2003 Server

### Supported File Standards

NIST: Types 1, 2, 4, 8, 10, 14, 15

ANSI: 378, 381 and 385

ISO: 19794-2/4/5

STMP, POP3, FTP or NFS file transmission

TCP/IP standard network connection

### Add-on Options

#### Edit Workstation

Provides additional customization options including annotation and error correction

#### Print Server

Configures network printers to generate and print specific forms or reports

#### Management Server

Allows users to remotely configure and update a particular live scan system on a network
