

RoadTest

Features & Benefits:

- Easy to learn
- Ease of use
- Increased efficiency
- Electronic capture and archive for test forms
- Pen-based data capture
- Handwriting recognition accuracy
- Optional GPS tracking for increased test integrity
- Powerful automated reporting
- Integration with Motor Vehicle systems

Go Paperless with Automated Driver Skills Testing on a Tablet PC

Streamline data entry and simplify your workload

Replace paper-based processes for scoring driver skills tests, pre-trip inspections and recording road test infractions. Electronic forms are easy and fast on a lightweight, portable tablet PC. It automates the required processes, and uses wireless technology for real time communication of test data to a central database.

Product Features and Benefits:

- **Easy to Learn/Ease of Use** - RoadTest electronic forms are designed with the look and feel of your existing paper forms, ensuring a painless transition from paper to digital for examiners.
- **Powerful Pen-Based Data Capture** - This RoadTest engine is integrated with intelligent form elements such as checkboxes, dropdown lists, date/time selections, text areas, number areas, special signature fields, and much more.
- **Increased Efficiency** - RoadTest reduces the time and labor costs associated with re-keying data into enterprise systems and the cost of physically distributing copies of paper forms across the organization. (Especially useful for CDL tests.) Testing data is sent electronically and may be accessed immediately by system users.
- **Handwriting Accuracy** - Our advanced handwriting recognition algorithms allow examiners to capture hand-written notes and signatures, with highly accurate results, and also convert handwritten notes to text format.
- **GPS Tracking for Increased Test Integrity** - RoadTest helps eliminate fraud in the skills testing process with features including GPS tracking capability and automated scoring. The optional GPS tracking allows full route tracking, real-time interactive GPS map display for each road test, with the addition of a small, GPS receiver attached to the tablet PC. GPS data and map image may be saved with the electronic document, providing documented evidence of the road test for later use.
- **Electronic Forms Archiving** - RoadTest not only captures and retains all data from each individual skills test attempt, it also stores the electronic test form itself in exactly the form it was originally completed. All handwritten notations and signatures are retained, and the entire test form is reproducible and printable. (Entire electronic portfolio can be uploaded to agency database.)
- **Integration with Motor Vehicle Systems** - RoadTest's flexible .NET architecture simplifies the process of integrating with other systems.

RoadTest Specifications

Software Requirements	Windows XP
Hardware Requirements	Tablet PC, 1GB RAM 60GB Hard drive
Optional GPS Module	Map Point 2006 with GPS Module

Reporting Made Simple:

RoadTest offers the following built-in reports:

- **Applicant History Report** – A summary of all tests taken by an individual
- **Activity Report** – A streamlined summary of all tests
- **Examiner Summary** – A summary of all tests by Examiner
- **Location Summary** – A summary of all tests by Location
- **Test Type Summary** – A summary of all tests by test type

About L-1 Identity Solutions Secure Credentialing Division

With over 6,500 document authentication systems in use in 20 countries, the Secure Credentialing Division of L-1 protects and secures identities and assets by helping customers produce the most secure IDs available, from driver's licenses to passports. Our solutions encompass a circle of trust around all aspects of an identity and its credential, including enrollment, proofing, issuance and usage.
